

Load and validate XML against XSD

Steps to be followed to validate a XML file against XSD:

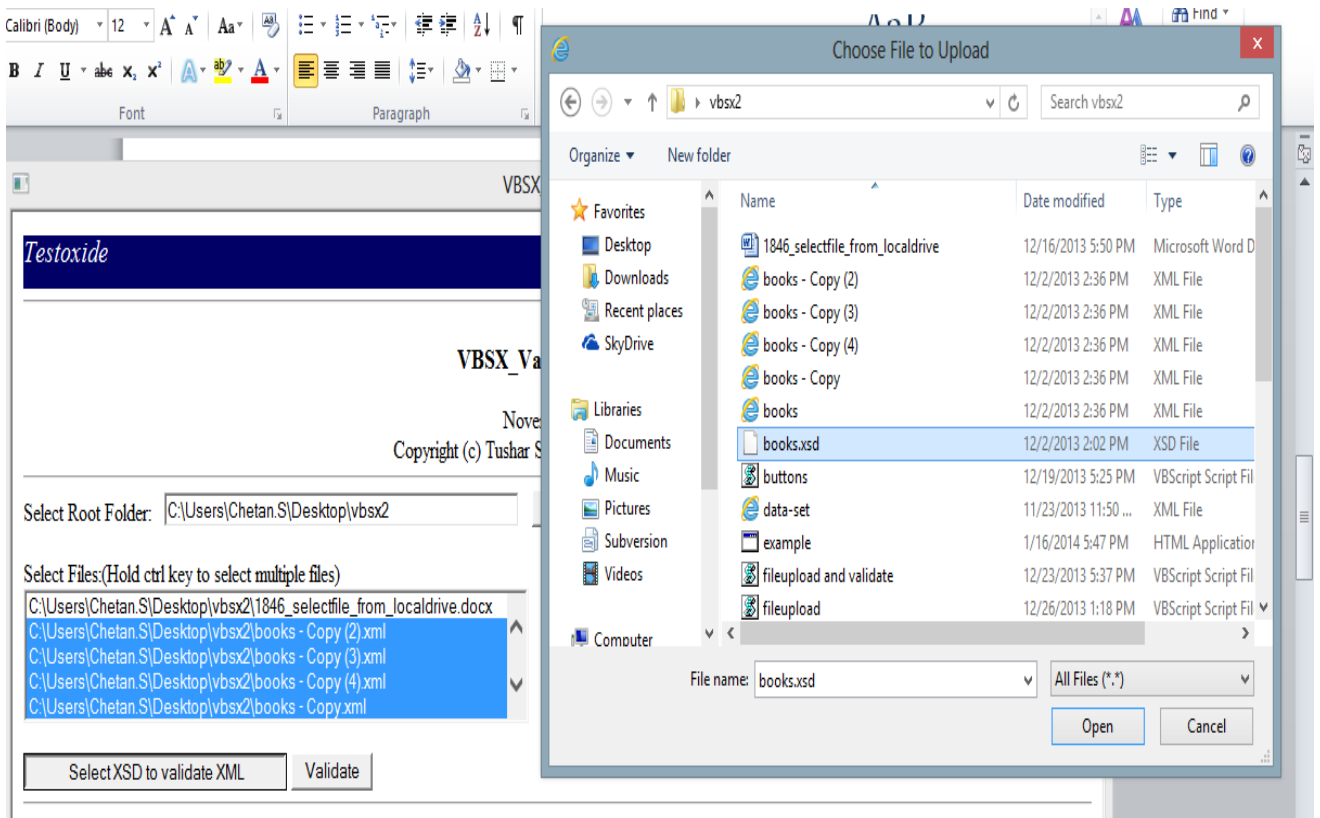

Run the file Select_directory_validateXML.hta

The screenshot shows a web application titled "Testoxide" in a dark blue header. Below the header, the application is titled "VBSX_Validator_v1.1.2" with a version date of "November 2013" and copyright information "Copyright (c) Tushar Sharma | www.testoxide.com". The interface includes a "Select Root Folder:" label next to a text input field and a "Get Files" button. Below this is a "Select Files:(Hold ctrl key to select multiple files)" label next to a file selection area. At the bottom of the main content area, there are two buttons: "Select XSD to validate XML" and "Validate". The footer contains the text "VBSX_Validator 2013-2014 Tushar Sharma | www.testoxide.com" and "CONTACT- projects@testoxide.com".

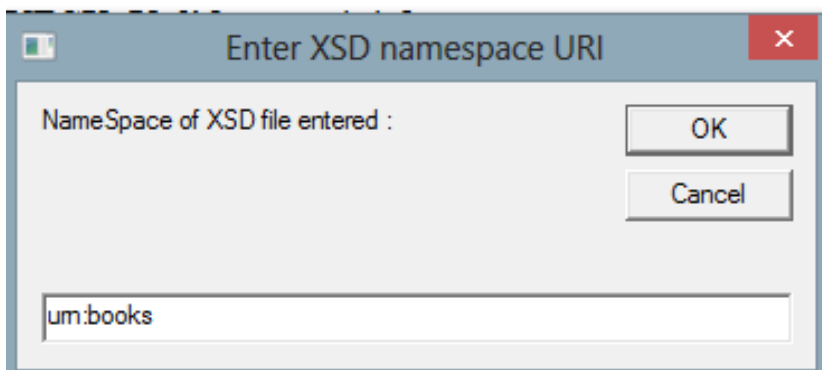

1. Select directory containing XML files from local drives-

2. Select single or multiple files (hold ctrl key for multiple selection) and click on “select XSD file to validate XML” button

3. Then enter Namespace/Schema of xsd in provided text box-

4. Now click on validate button. If XSD file successfully validates selected XML files , the following message will display-
